EDUCATION

University of Maryland, College Park, MD
Bachelor of Science, Computer Science - Cybersecurity Track *Expected: May 2027*

TECHNICAL SKILLS & CERTIFICATIONS

- **Languages: Python**, C, Java, C#, SQL, KQL, TypeScript, Bash
- **Security:** NIST CSF, MITRE ATT&CK, OWASP Top 10, threat modeling, cryptography, **Burp Suite**, **Metasploit**, nmap
- **Cloud & Infra: Azure**, AWS, GCP, Docker, Terraform, PostgreSQL/pgvector, Redis, Linux, Git, ASP.NET
- **AI/ML:** LLM evals, prompt-injection, RAG (pgvector)
- **Certifications:** CCNA (IP), Cisco Intro to Cybersecurity, Ethical Hacking Tools w/Python, Security+ (in progress)

PROFESSIONAL EXPERIENCE

Microsoft **Redmond, WA**
Software Engineer Intern *May 2026 - Aug. 2026*

- Built the **MAP Portal**, the team's first end-to-end access-governance platform: a **React/TypeScript** frontend, **ASP.NET Core** APIs, a **KQL correlation engine** joining access-assignment tables against **7.9M** usage records across **31 Azure subscriptions**, and Azure App Service deployment via **Bicep/CI-CD**.
- Built utilization scoring on top of the correlation engine, surfacing **124 of 157** group-held grants as unused over a **30-day window** across two pilot services, turning raw access data into a ranked least-privilege remediation queue for service owners.
- Worked with Microsoft's **AEGIS** AI safety org on **Clarity Agent**, its open-source AI reasoning agent: ran a self-initiated pentest, producing **7 findings**, and shipped **2 merged PRs** closing a setup failure path and an invariant test preventing the defect class from recurring.

Cisco **RTP, NC**
Consulting Engineer Intern *May 2025 - Aug. 2025*

- Extended Cisco's **IOS-XE Terraform provider** for network infrastructure-as-code automation, adding new resource types (CDP, UDLD) and shipping reusable **.tf modules** with **YAML** inventory support for declarative switch configuration; cut deployment time by **80%** and improved repeatability and rollback via versioned plans.
- Authored a security architecture guide for Cisco's **Identity Services Engine** lab covering endpoint access, authentication flows, and policy enforcement; reduced lab onboarding time by **3+ hours.**
- Engineered a full-stack **AI Network Health Check** tool to analyze media traffic and surface anomalies, accelerating incident response and reducing manual analysis time by **50%+**.

S.S. Papadopoulos & Associates, Inc. **Rockville, MD**
Security Intern + IT Technician *Sep. 2024 - May. 2026*

- Executed network reconnaissance (**Censys, crt.sh, httpx**) and built a **penetration testing framework** to evaluate access controls against **NIST** compliance, mapping **60 subdomains** and identifying **7 critical vulnerabilities**; findings drove an **11%** improvement in network security posture.
- Built a **RAG pipeline** using **PostgreSQL/pgvector** and on-premises LLMs for processing confidential legal documents, enabling secure semantic search without exposing client data to third-party APIs.

Software Engineer Intern *Jun. 2024 - Aug. 2024*

- Wrote a **Fortran** program optimizing well location, count, and cost for a groundwater treatment operation, projected to save the company **$100K+** annually.

PROJECTS

NARA - Autonomous AI Red Team Agent - BitCamp 2026 Hackathon Winner - Python, LLM Agents **GitHub** - Apr. 2026

- Developed an **autonomous penetration testing CLI** in Python that orchestrates a **3-agent pipeline** (Scanner, Planner, Exploiter); integrates **Semgrep/Bandit** for vulnerability analysis and weaponizes findings against isolated **Ubuntu/Docker** containers.
- Engineered a **self-correcting exploit feedback loop** using **LLM reasoning** to dynamically adapt kill-chain execution based on real-time shell output; enables end-to-end automated proof-of-concept with **live noVNC streaming** for observability.

PromptGuard - Prompt Injection Attack & Defense Benchmark - LLM Eval **GitHub** - Jan. 2026

- Built an eval harness benchmarking **148** attack vectors across **23** categories, achieving a **99.9**% block rate with a multi-layered defense pipeline; published the methodology as open-source documentation.

Shadow IT Radar - Next.js, FastAPI, PostgreSQL, Redis, AWS ECS **GitHub** - Aug. 2025

- Built a **multi-tenant SaaS platform** to discover unapproved software usage, designed for **10K+ app scans/day at <200ms query latency**, using OAuth-based app discovery (Google Workspace, Microsoft Graph), LLM-assisted risk scoring, and **RBAC** with audit logging.
